1. Introduction

This document provides the instructions to setting up the Eagle-Kit and procedure to program the Eagle Kit board both on Windows and Ubuntu Host PC.

This document is intended for all users of Eagle-Kit.

2. Eagle Kit Overview

The Mistral MRD5165 Eagle Kit is based on Qualcomm's QRB5165 processor. The MRD5165 Eagle kit provides high-performance compute platform for precise artificial intelligence (AI) and machine-learning inferencing technology to facilitate the accelerated development of innovative, power-efficient, high-computing robots and drones for enterprise, industrial, and professional service applications. It offers readily deployable SDKs, Ubuntu Root-FS and tools for product development to facilitate quick prototyping and proof-of-concept evaluations. Additionally, this kit includes high performance connectivity interfaces making it an ideal platform for connected Eagle device in IOT, Drones and Robotics.

3. Getting Started

The Mistral MRD5165 Eagle Kit offers a versatile platform for product developers to evaluate system functionality, experiment with sample applications, migrate existing applications, create new features, and integrate with a variety of peripheral devices. This kit provides a Linux software environment for application development, with the option to customize and update the system software using a chosen release of the QRB5165 system software.

The Eagle Kit Programming Guide provides an overall description of the hardware setup and Host PC steps to flash the Eagle Kit

4. Eagle-Kit Programming Accessories

Basic Accessories required for Eagle-Kit Programming:

1. DC Adapter
2. Power Chord
3. Custom power cable
4. USB Type-C Cable
5. USB Micro-B Cable

Note: USB Micro-B cable is not part of the kit accessories.

5. Eagle Kit Setup

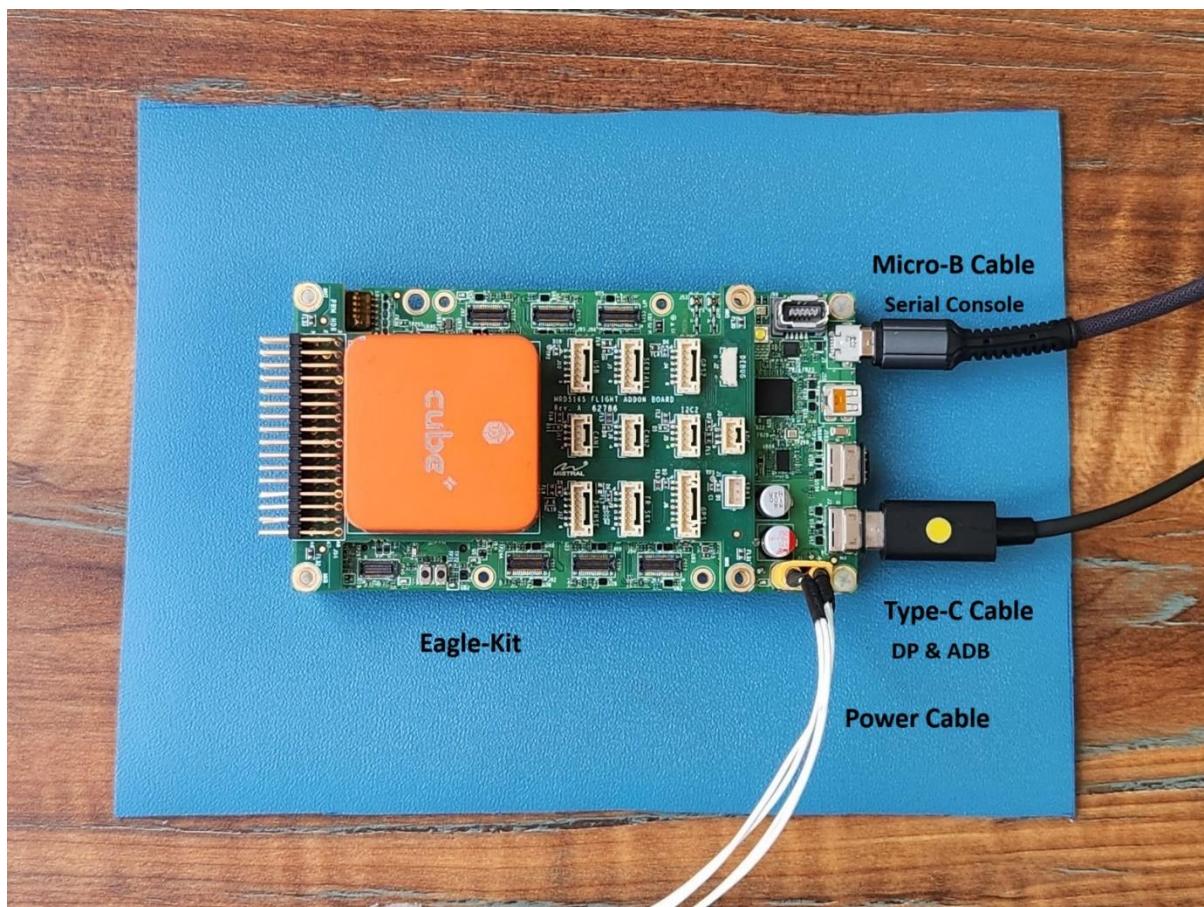

Figure 1 MRD5165 Eagle Kit

1. Connect the DC adapter using Power cable to J1
2. Connect a USB Type-C cable to J103 (adb connection)
3. Connect a Micro-B cable to J5 (Debug console)

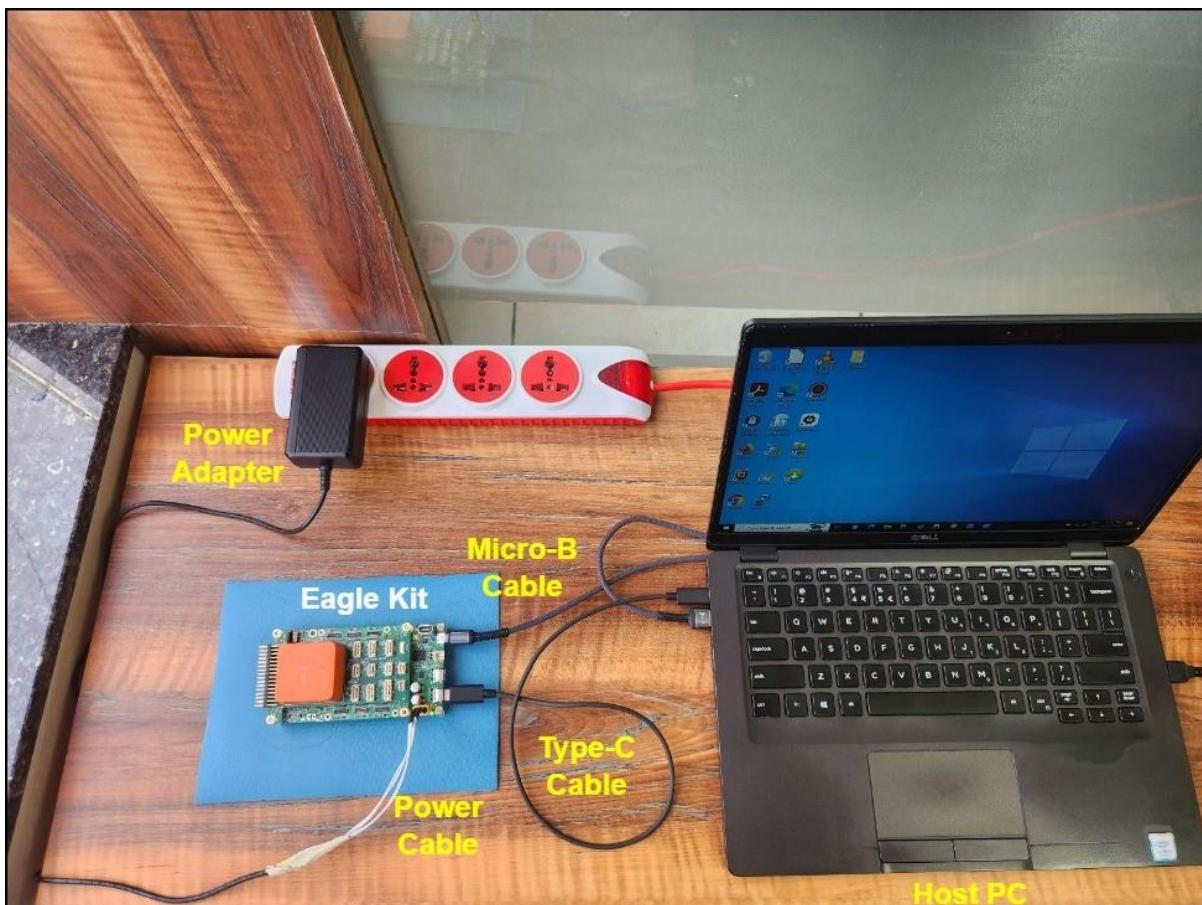

Figure 2 MRD5165 Eagle Kit connection to PC

6. Setting up Eagle Kit in QDL/EDL Mode

1. Disconnect the Type-C cable and Power cable from the Eagle Kit
2. Press and hold the Eagle Kit Main Board SW5 (**SDM_FORCE_USB_BOOT**) switch.
3. Connect the Power cable and Power up the Eagle Kit
4. Connect the Type-C cable between Host PC and Eagle Kit
5. Observe the Eagle Kit device presence on the QFIL tool.
QFIL Tool Device Detection entry check: **Qualcomm HS-USB QDLoader 9008 (COMxx)**
6. Connect the Micro-B cable between Eagle kit and Host PC for programming logs.

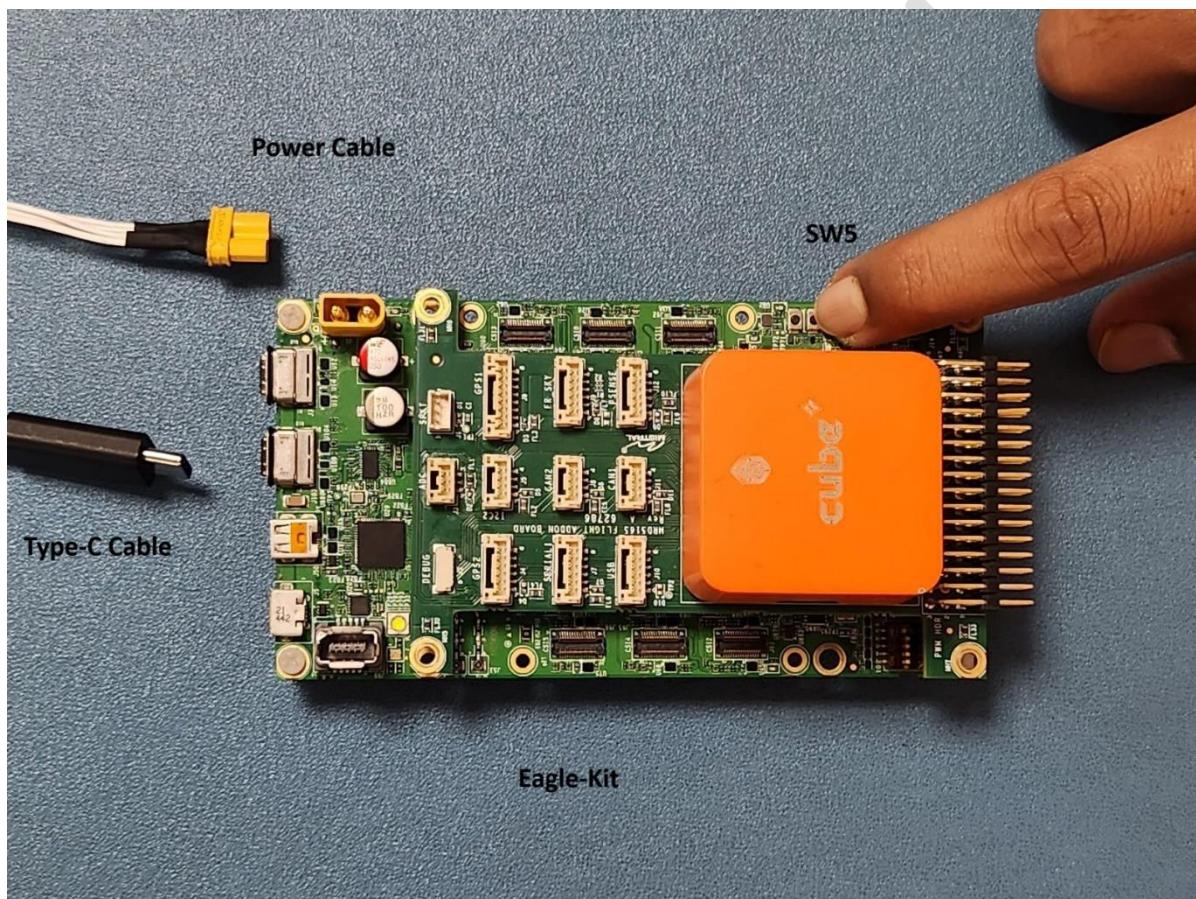

Figure 3 MRD5165 Eagle Kit FORCE-USB SW5 Press

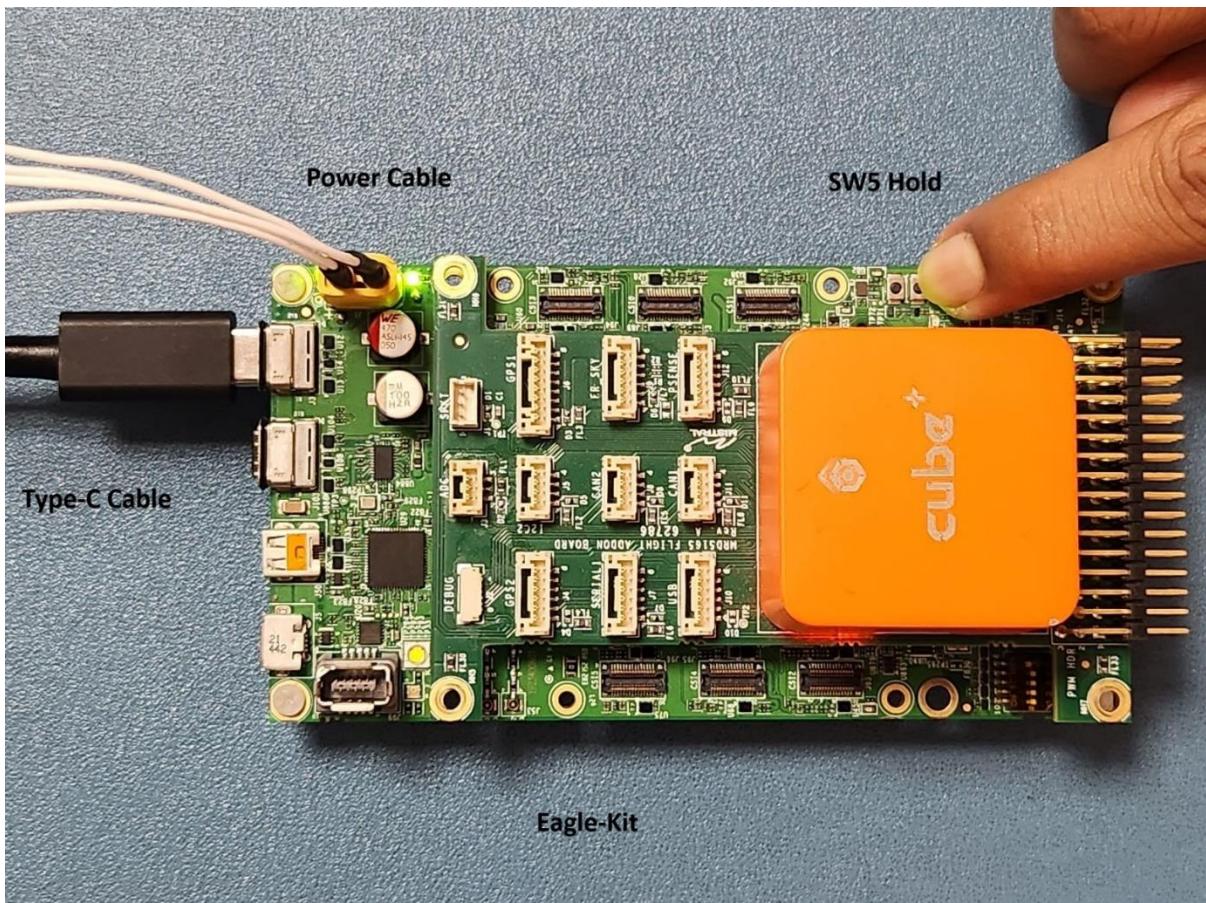

Figure 4 MRD5165 Eagle Kit SW5 Hold, Type-C connected and Power Up

7. Windows HOST PC Setup

1. After purchasing the Eagle Kit, please register at the Mistral website to download the most recent flat build Package.
2. Acquire the newest iteration of QDART that includes QFIL tool for the Windows OS from Qualcomm CreatePoint. The link for this is provided below:
<https://createpoint.qti.qualcomm.com/search/#tools/searchArgs/q||QDART||rows||20||sortField||releaseDate||sortOrder||desc>

Note: QDART/QFIL is required if Windows is used as host machine for programming.

3. Download the Qualcomm USB driver from Qualcomm CreatePoint. The link for this is provided below:
<https://createpoint.qti.qualcomm.com/search/#tools/searchArgs/q||USB%20driver||rows||20||sortField||releaseDate||sortOrder||desc>
4. Windows Host PC adb and fastboot installation

Download platform tools for Windows from the link provided below.

<https://developer.android.com/tools/releases/platform-tools>

8. Windows Host PC QFIL Configuration and Programming

1. Extract the downloaded flat build zip package.

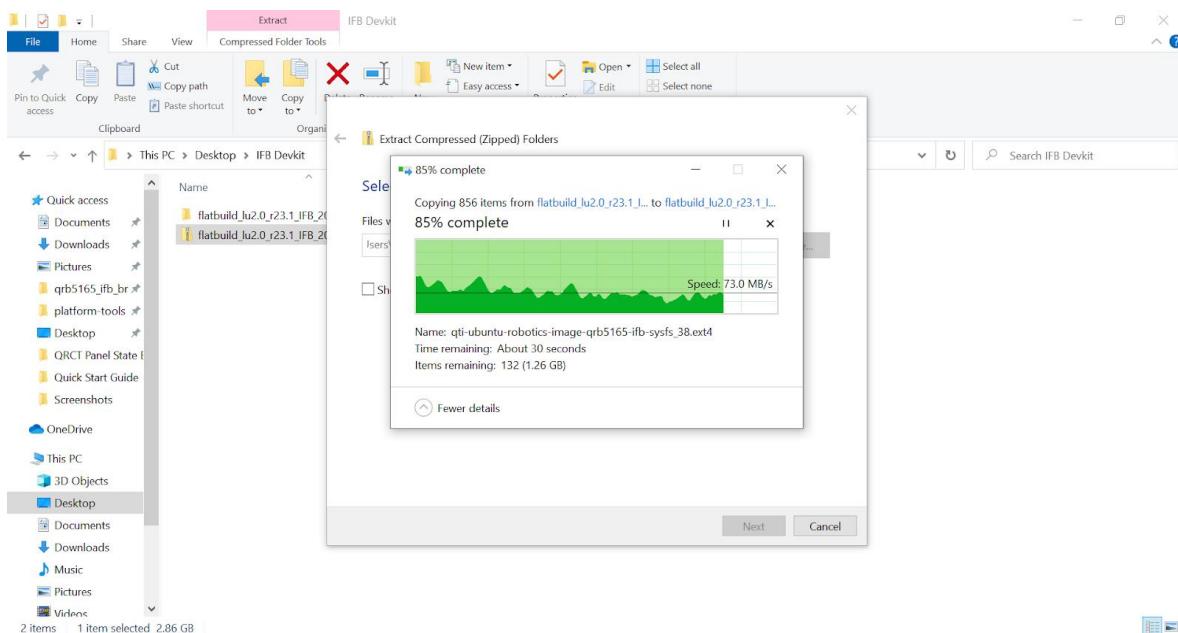

Figure 5 Flatbuild Package unzip/extract

2. Observe the extracted files as below:

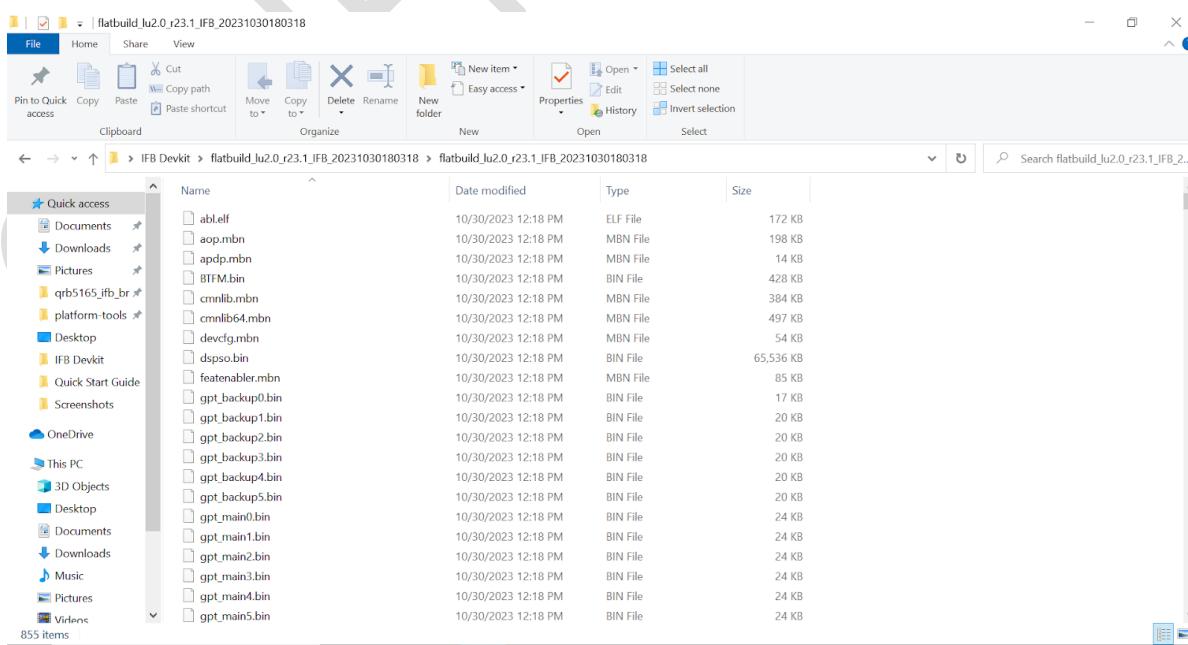

Figure 6 Flat build Package Folder Files

3. Observe and Select the Eagle Kit EDL COM port for programming.

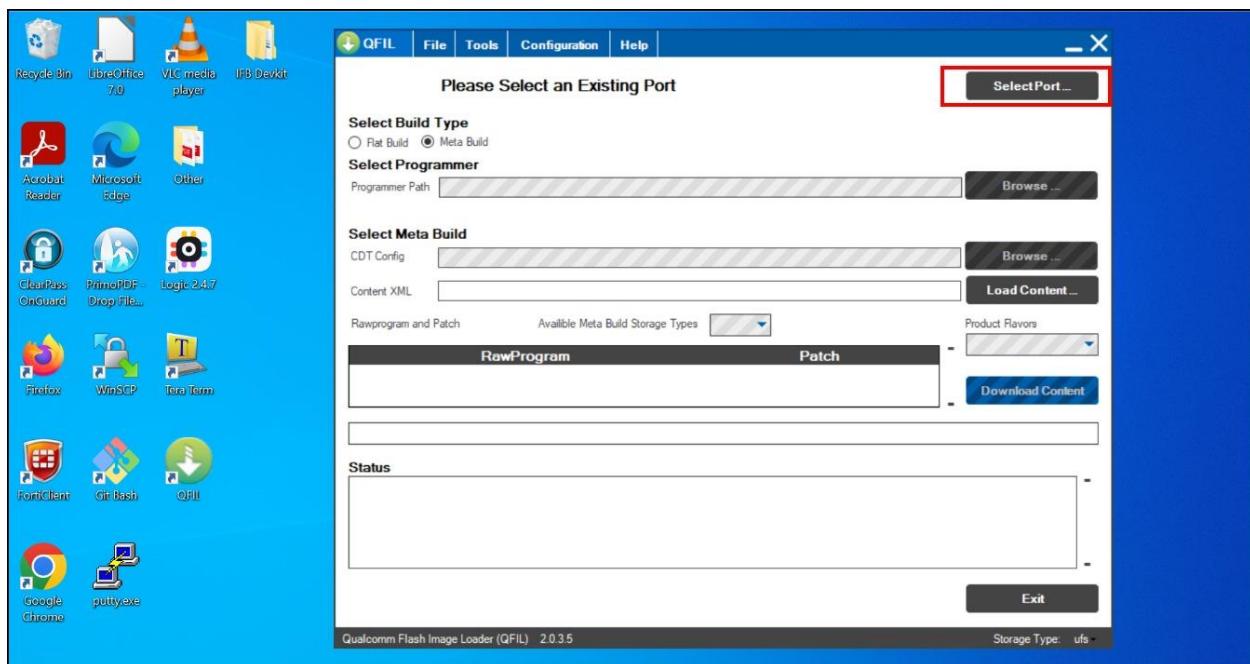

Figure 7 QFIL tool Select Port

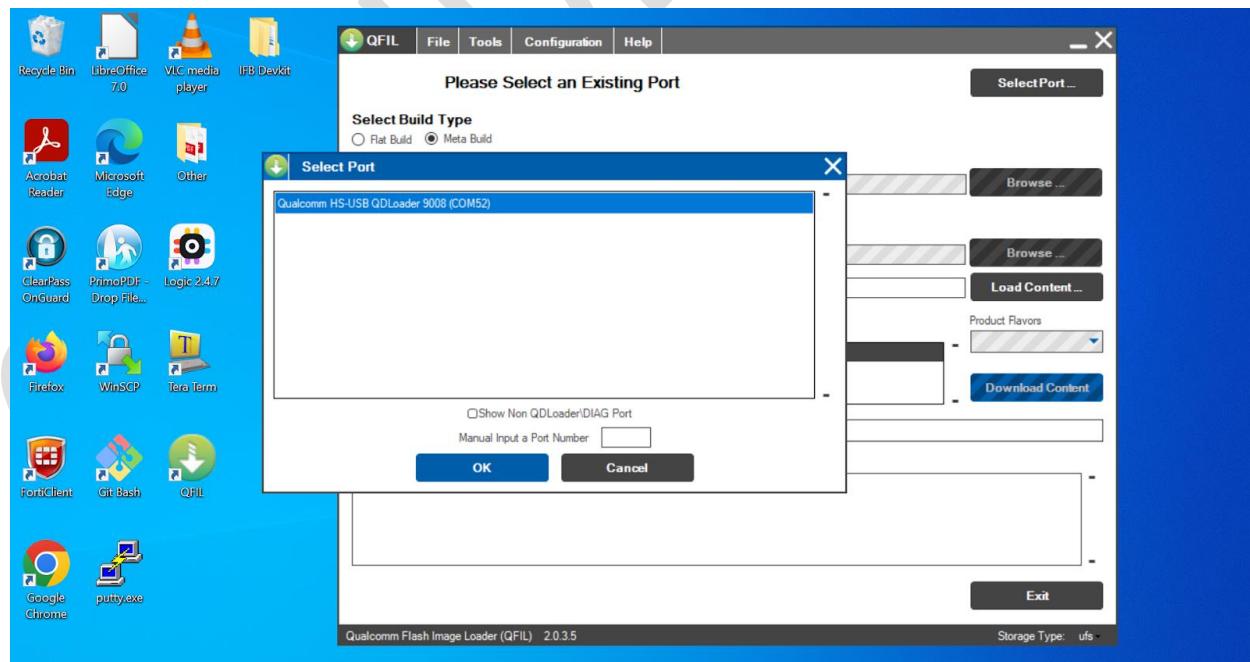

Figure 8 Eagle Kit QDL COM port selection

4. Select Build Type to “Flat Build” In QFIL

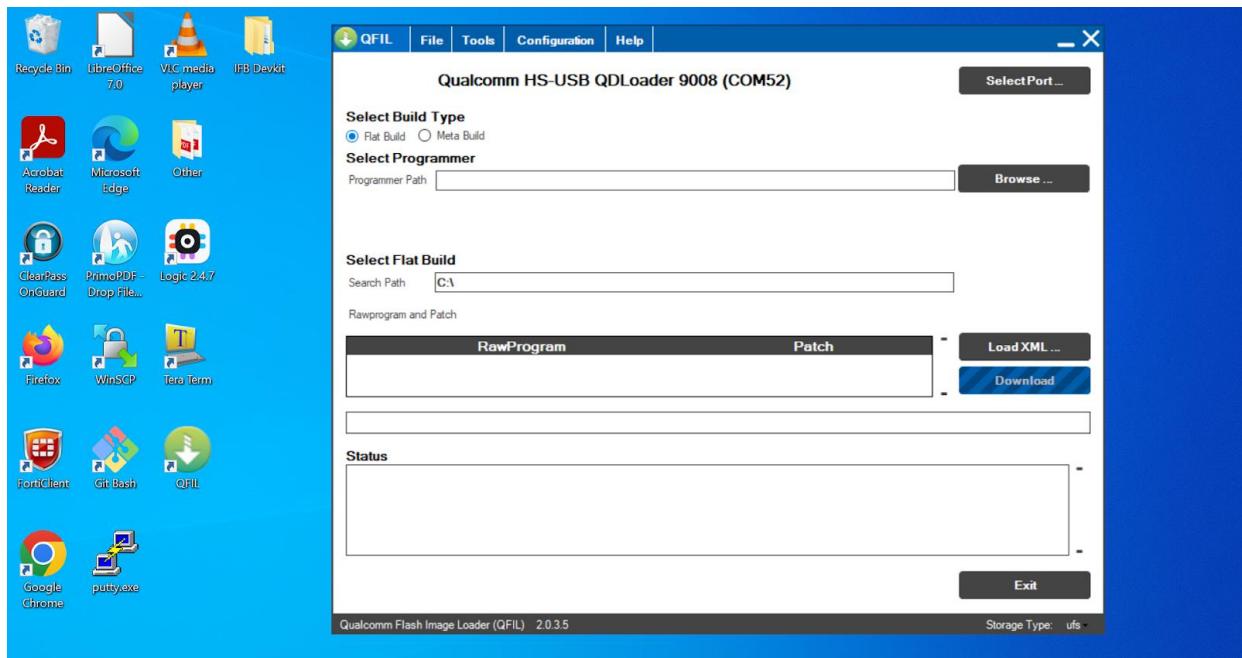

Figure 9 Select Build Type to “Flat Build”

5. Set the QFIL tool Configuration as below: Select Configuration -> FireHose Configuration

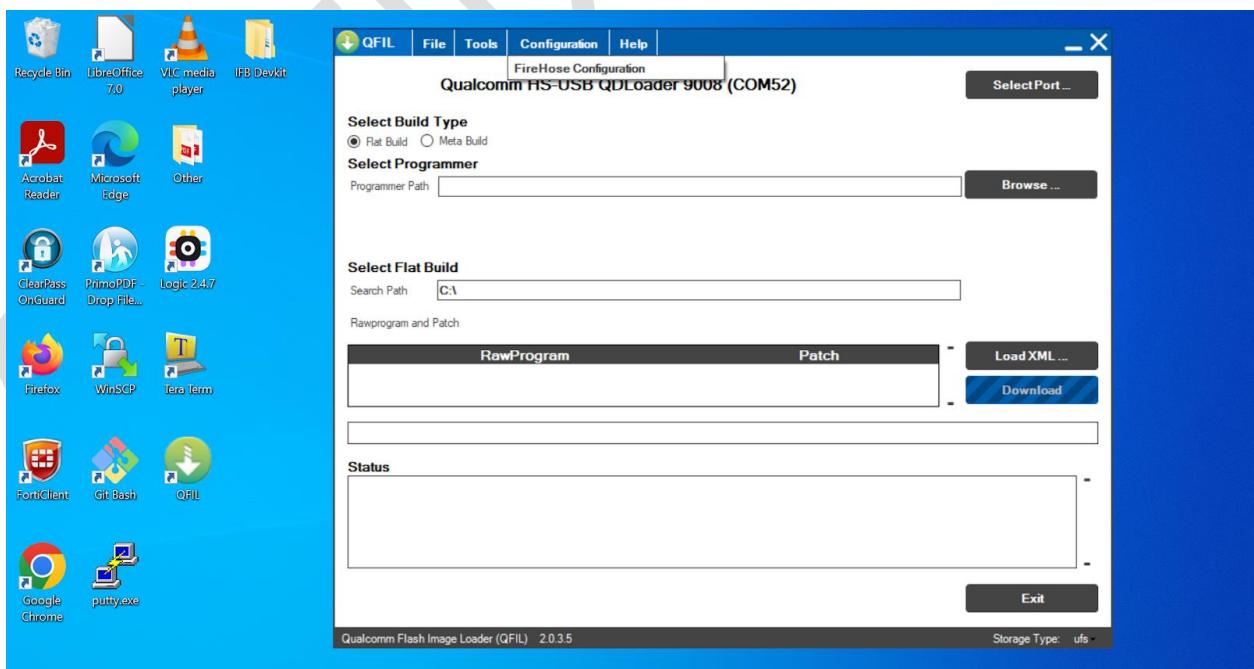

Figure 10 Select “FireHose Configuration”

6. Set the Firehose programmer settings as below:
 - a. Download Protocol: **0 - Sahara**
 - b. Device Type: **ufs**
 - c. Ensure "**Provision**" is unchecked.
 - d. Check the "**Erase All Before Download**" checkbox and click "**OK**"

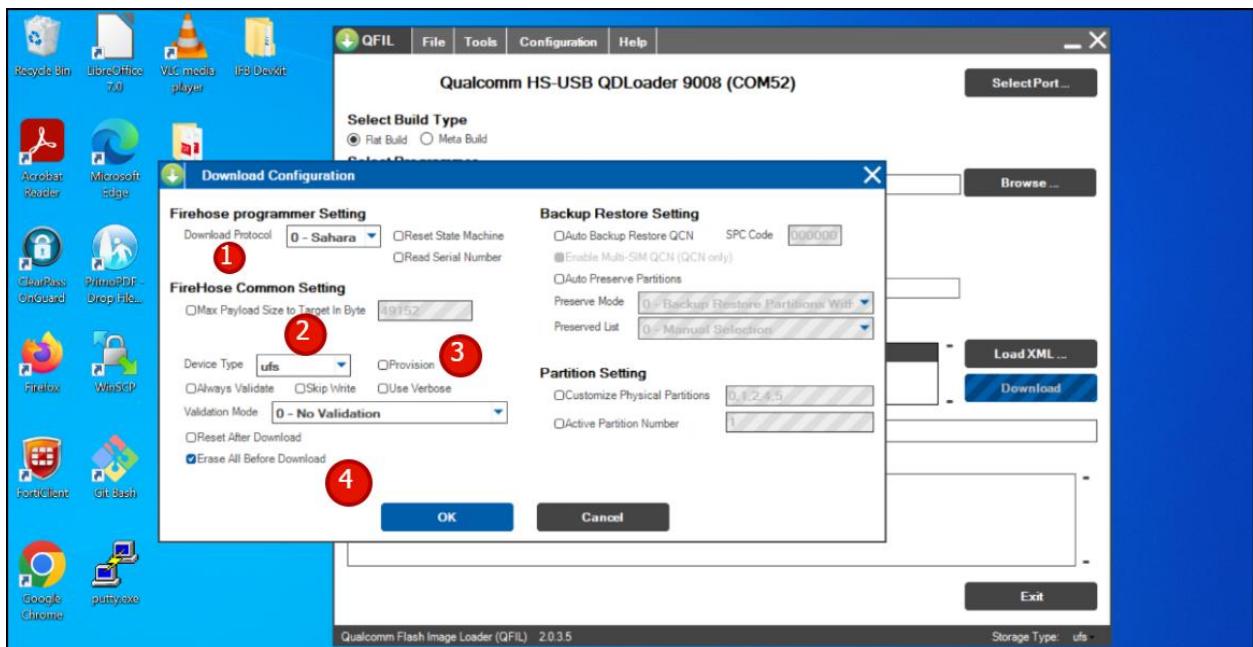

Figure 11 Firehose programmer setting configuration

7. Select QFIL Programmer file and Flat Build package files
 - a. Set the "**Programmer Path**" to file "**prog_firehose_ddr.elf**" from the extracted flatbuild package folder.
 - b. Select all the rawprogram and patch and load from the extracted flatbuild package folder.

```
rawprogram_unsparse0.xml
rawprogram1.xml
rawprogram2.xml
rawprogram3.xml
rawprogram4.xml
rawprogram5.xml
```

```
patch0.xml
patch1.xml
patch2.xml
patch3.xml
patch4.xml
patch5.xml
```

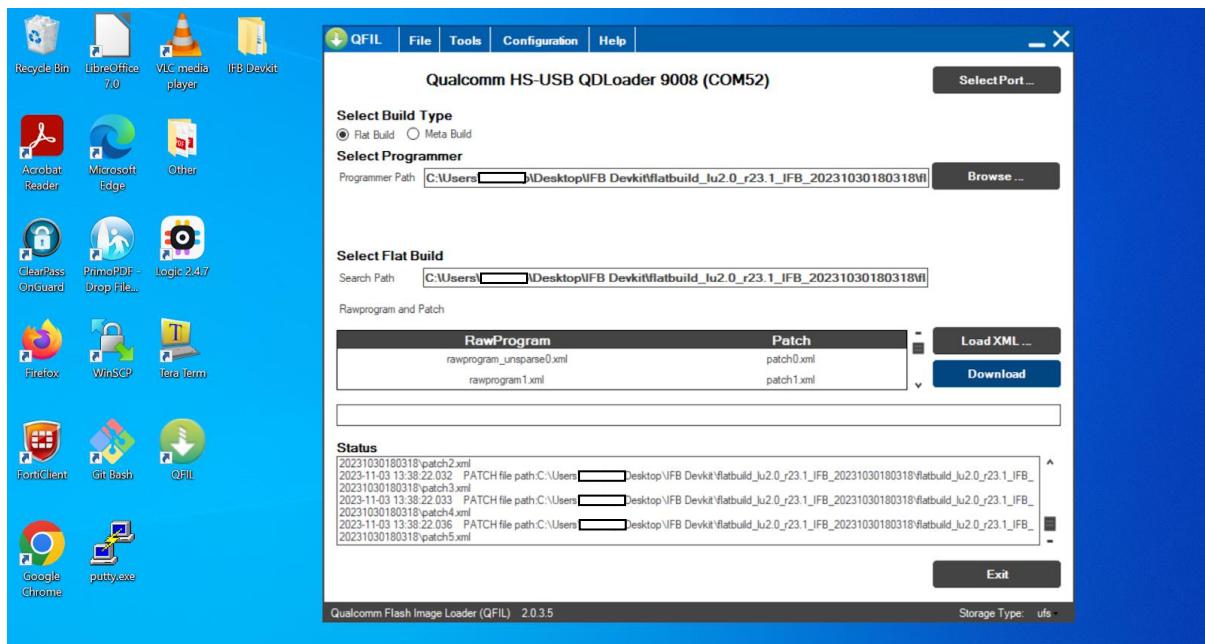

Figure 12 RawProgram and Patch configuration

8. Observe the Programming logs over debug console too. Open Tera Term with Serial console COM port and set baudrate to 115200.

Expected logs after flash is completed.

```

```

Figure 13 Serial Console Programming logs

9. Start Programming

- Once all the above steps are done click the QFIL “Download” button
- Observe the Download progress bar and status logs

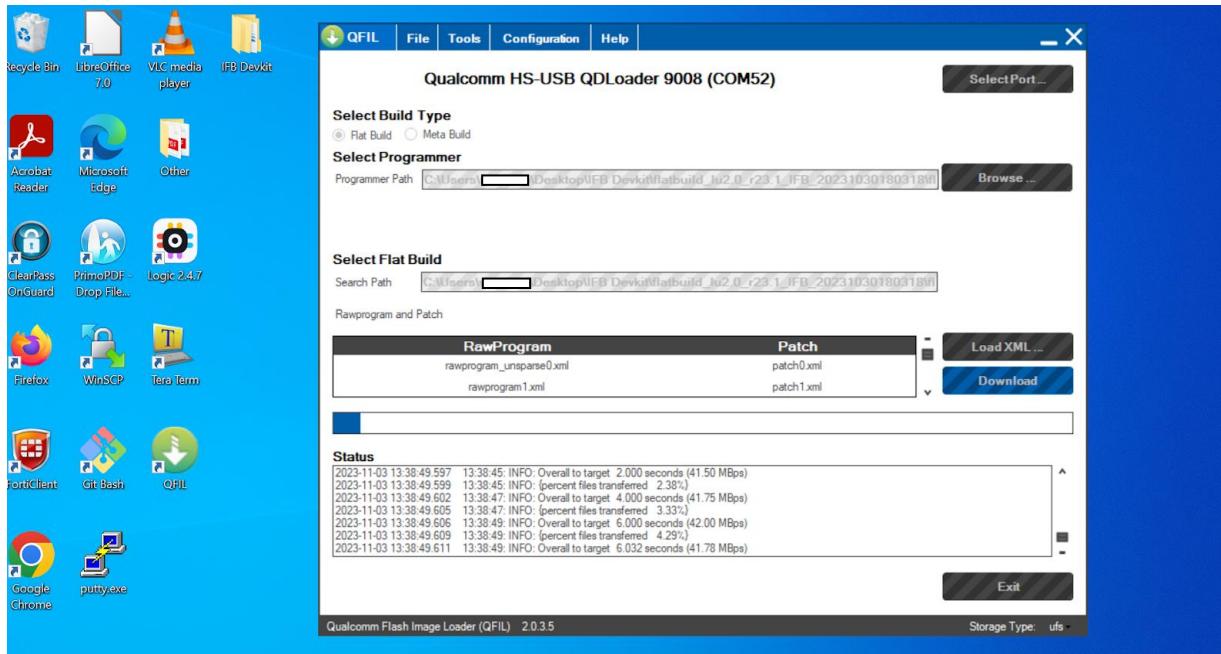

Figure 14 QFIL Flash Download In-Progress

- Upon successful completion observe “Download Succeed” and “Finish Download” on status logs.

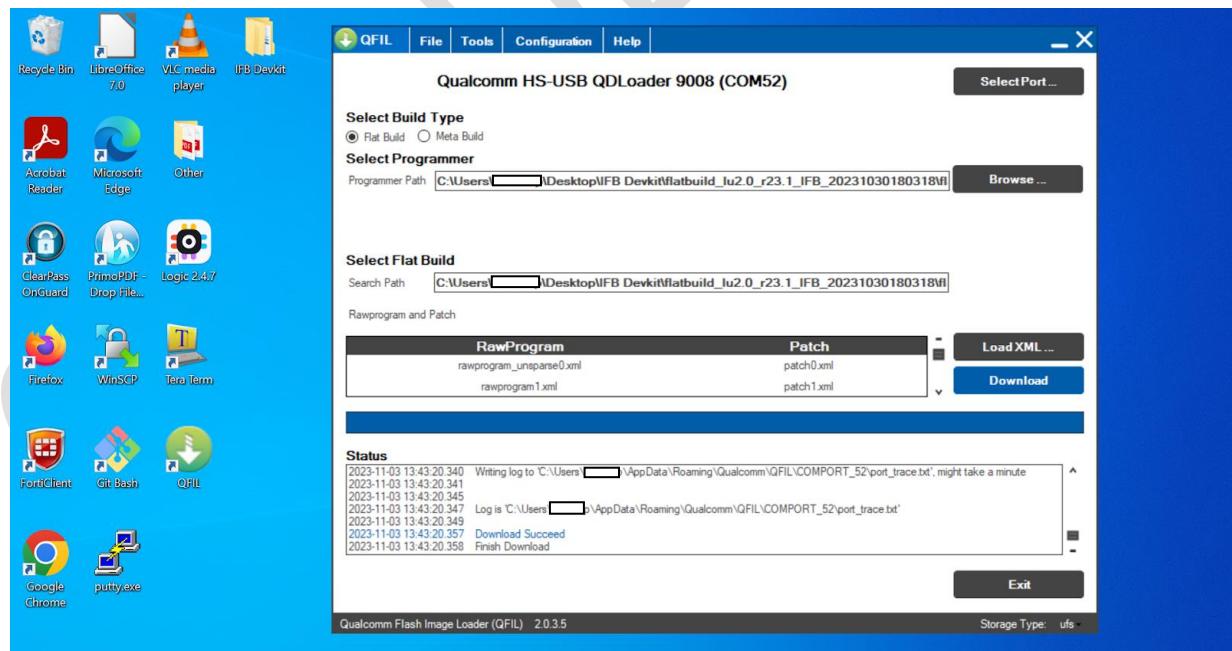

Figure 15 QFIL Flash Download Succeed

9. Ubuntu Host PC Programming

1. Follow the procedure “[Setting up Eagle Kit in QDL/EDL Mode](#)” to set the Eagle Kit in EDL mode.
2. Extract the downloaded Flatbuild zip file \$ unzip “flatbuild_package.zip”
3. Ubuntu Host PC adb and fastboot installation
Use the commands below to install adb and fastboot.

```
$ sudo apt-get update

$ sudo apt-get install android-tools-adb android-tools-
fastboot
```

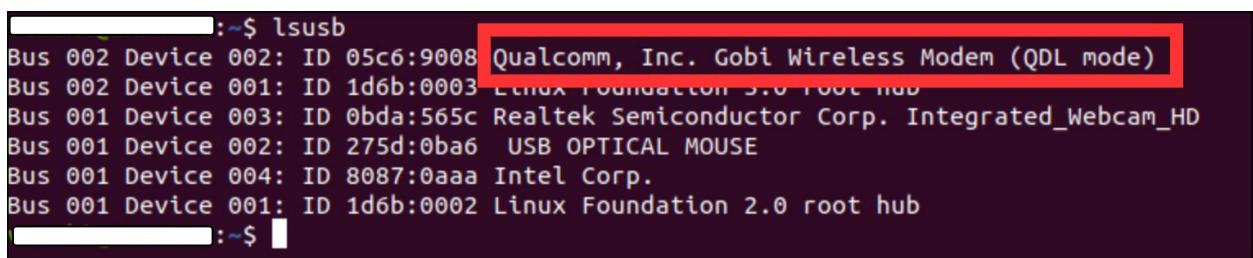

```

4. Verify the Eagle Kit device is in EDL mode

```
$ lsusb
```

Observe Qualcomm device entry mentioned with “(QDL mode)”

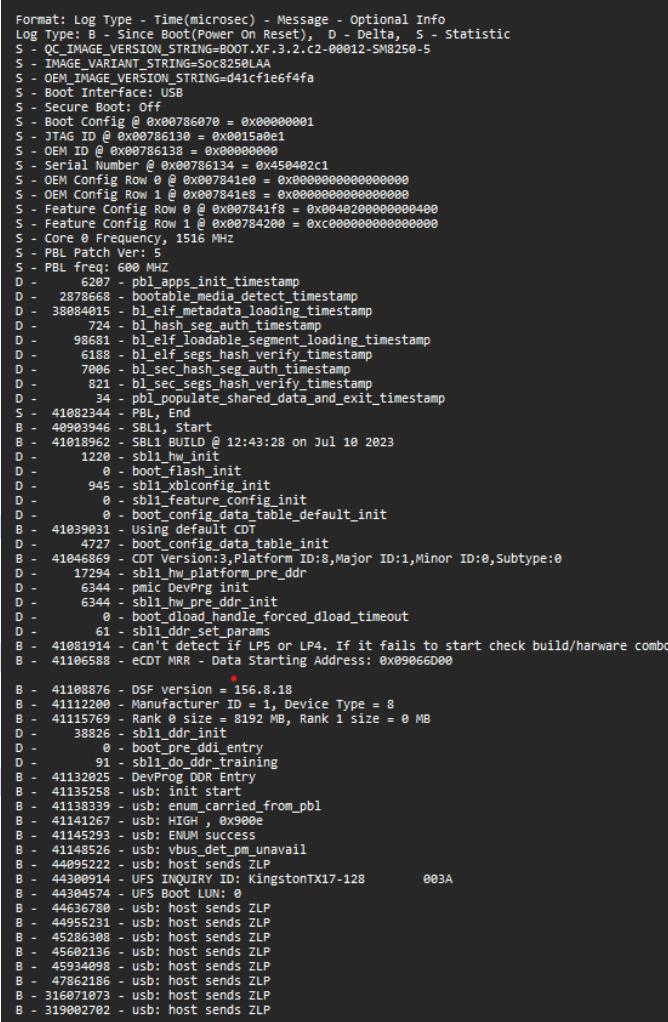

```
:~$ lsusb
Bus 002 Device 002: ID 05c6:9008 Qualcomm, Inc. Gobi Wireless Modem (QDL mode)
Bus 002 Device 001: ID 1d6b:0003 Linux Foundation 3.0 root hub
Bus 001 Device 003: ID 0bda:565c Realtek Semiconductor Corp. Integrated_Webcam_HD
Bus 001 Device 002: ID 275d:0ba6 USB OPTICAL MOUSE
Bus 001 Device 004: ID 8087:0aaa Intel Corp.
Bus 001 Device 001: ID 1d6b:0002 Linux Foundation 2.0 root hub
:~$
```

Figure 17 Ubuntu Host PC Eagle Kit QDL mode check

5. Observe the Programming logs over debug console too. Run the minicom command with Serial console device node and set baud rate to 115200.

```
$ sudo minicom -D /dev/ttyUSB0 -b 115200
```

Expected logs after flash is completed.

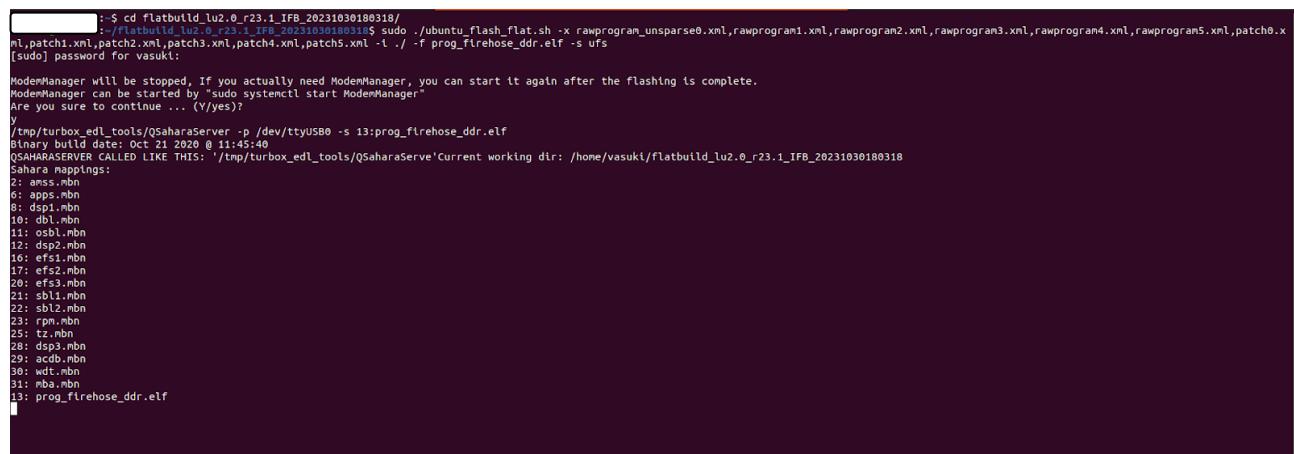

```

Figure 22 Ubuntu Host PC Eagle Kit Complete Boot and Login Prompt

11. Fastboot Programming

1. Host PC setup

a. Windows Host PC adb and fastboot installation

Download platform tools for Windows from the link provided below.

<https://developer.android.com/tools/releases/platform-tools>

b. Ubuntu Host PC adb and fastboot-t installation

Use the commands below to install adb and fastboot.

```
$ sudo apt-get update
```

```
$ sudo apt-get install android-tools-adb android-tools-fastboot
```

2. Eagle Kit fastboot mode set

a. Fastboot mode set using adb commands

- Connect the device over adb, verify the device presence in adb mode
\$ adb devices
- Enter as a root user
\$ adb root
- Enter into fastboot mode
\$ adb reboot bootloader
- After few seconds, check the device presence in fastboot mode
\$ fastboot devices

```
C:\Users\██████\Downloads\platform-tools_r33.0.3-windows\platform-tools>adb devices
List of devices attached
df746529      device

C:\Users\██████\Downloads\platform-tools_r33.0.3-windows\platform-tools>adb root

C:\Users\██████\Downloads\platform-tools_r33.0.3-windows\platform-tools>adb reboot bootloader

C:\Users\██████\Downloads\platform-tools_r33.0.3-windows\platform-tools>fastboot devices
df746529      fastboot
```

Figure 23 Eagle-Kit fastboot mode set using adb commands

- b. Fastboot mode set using VOL- key
- Disconnect the Type-C and Power cable
 - Press Vol- Key/SW3 switch

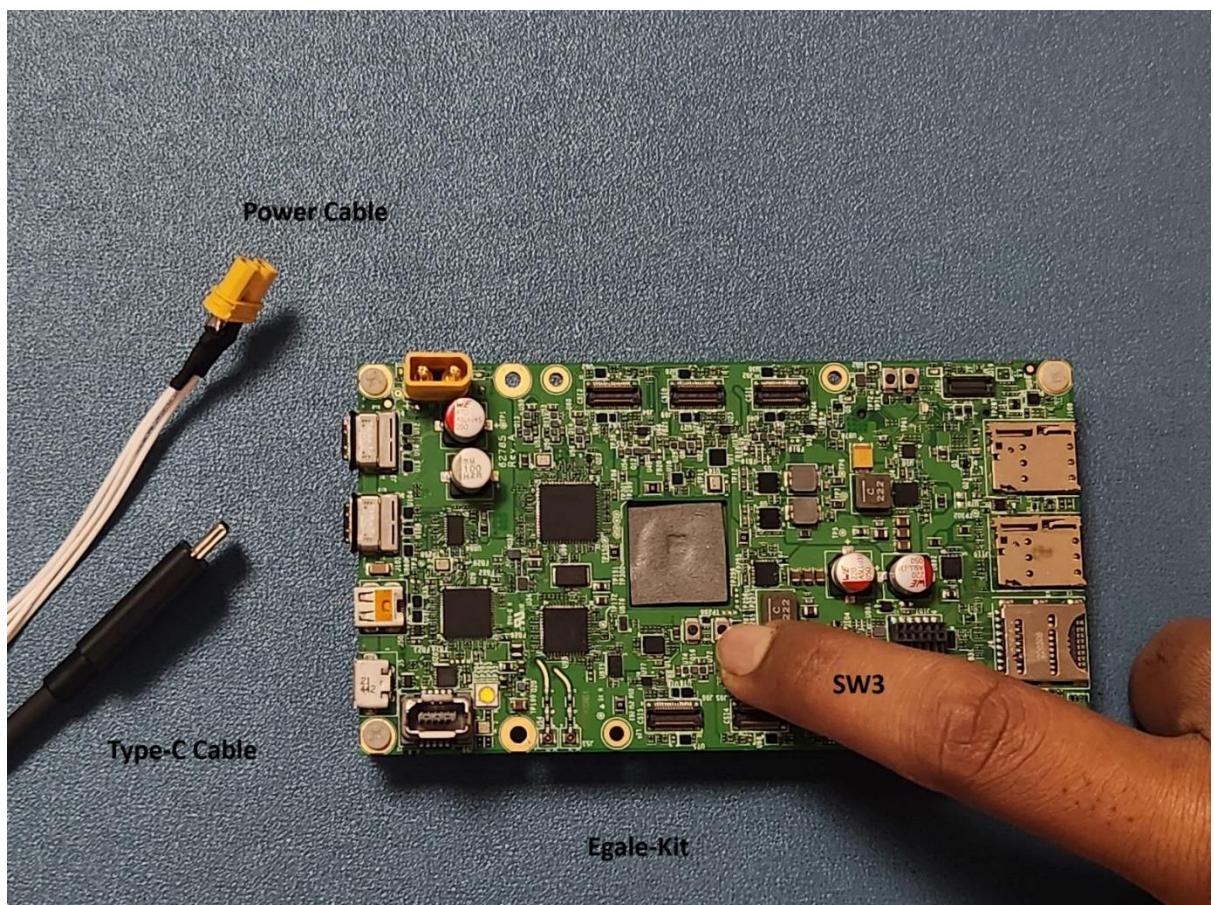

Figure 24 Eagle-Kit fastboot mode set using Vol- Key press

- Hold the VOL- key
- Connect the type-c cable to host pc
- Power up the Eagle Kit

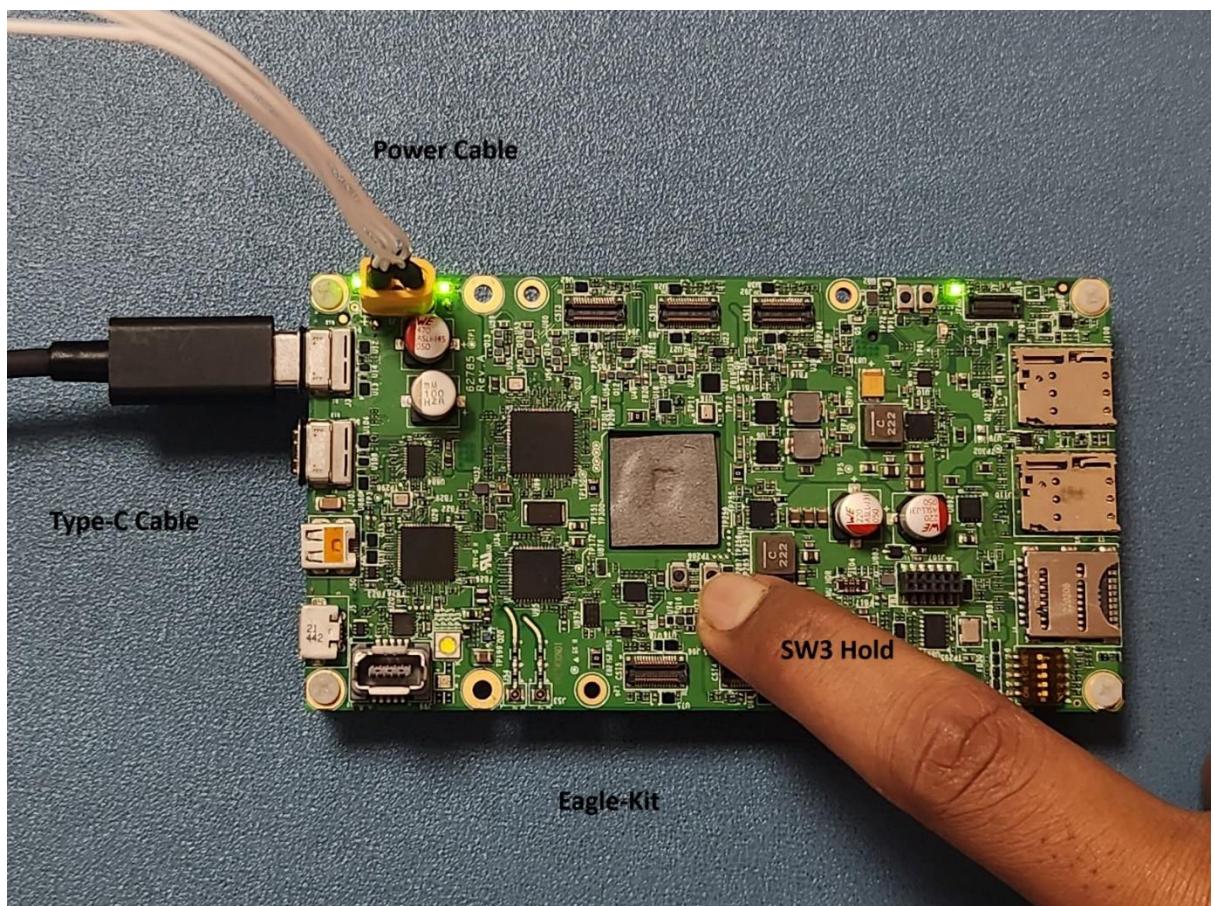

Figure 25 Eagle-Kit fastboot mode set using Vol- Key press and power up

- After few seconds, check the device presence in fastboot mode
\$ fastboot devices

S

3. Fastboot mode programming

Once the device is present in fastboot mode, run the following command for fastboot programming/flashing.

```
$ fastboot flash <partition_name> <file_name>
```

Example: Boot image flash

```
$ fastboot flash boot_a qti-ubuntu-robotics-image-qrb5165-ifb-boot.img  
$ fastboot flash boot_b qti-ubuntu-robotics-image-qrb5165-ifb-boot.img
```

Once flash is completed, reboot the device to boot the flashed images

```
$ fastboot reboot
```

```
